Note

- Most manuscripts have not been transcribed and in consequence these apparatuses contain only a sample of the extant corpus.
- The collations and apparatuses have been created using automated algorithms and may in consequence display occasional imprecisions, especially in word alignment when there is significant textual variation in a verse. Please use them for indicative purposes only.
- Some manuscripts contain a verse more than once. This often involved splitting a verse and placing each segment on a different section of the manuscript. We have implemented an algorithm that reconstructs the complete verse from the separate segments. Reconstructed verses are shown between round brackets. For example, 40844(1^c2) is the verse as it was attested in 40844 in a reconstruction that merged instances 1 and 2. Given that these are automated reconstructions, manual double-checks are advised. Sometimes it is not possible to safely reconstruct a verse and the witnesses where this is the case are not included in the collation (to see the specific witnesses that could not be reconstructed, please consult the witness counts for each verse).
- Corrected witnesses (marked with a superscript letter c) are reconstructed automatically and may display inaccuracies. They are shown with a ? sign to reflect this uncertainty. A corrected witness is included in the apparatus if its text is present in at least another witness, ie, if it does not attest to a singular reading.
- A witness is ignored if 60% or more of the words that it contains of the specific verse are uncertain.

Website version 2.0.0, witness transcriptions up-to-date as of October 1, 2023. More information at www.gntcollations.com. Collations created by Norman Simon Rodriguez.

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

¹These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

²The total number of witnesses is calculated as the total manuscripts (44) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (4) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: *Byzantine text not attested in its entirety in any of the collated manuscripts.*

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 11 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (29) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by

the century of their estimated date (latest estimated date).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: X.

Below is the earliest attestation of each *individual Byzantine reading*:

³These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

⁴The total number of witnesses is calculated as the total manuscripts (44) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (4) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 17 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (23) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.

⁵These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

⁶The total number of witnesses is calculated as the total manuscripts (44) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (3) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine textform for this verse in a transcribed manuscript: X.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts

are identical for the entire verse. There are 30 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (13) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

⁷These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

⁸The total number of witnesses is calculated as the total manuscripts (44) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (5) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: *Byzantine text not attested in its entirety in any of the collated manuscripts.*

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 10 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (29) attest to singular texts for the entire verse and are

therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

⁹These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

¹⁰The total number of witnesses is calculated as the total manuscripts (46) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (9) minus the fragmentary witnesses (2) plus the included corrected witnesses (0).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine textform for this verse in a transcribed manuscript: X.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 19 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (16) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

¹¹These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

¹²The total number of witnesses is calculated as the total manuscripts (47) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (7) minus the fragmentary witnesses (2) plus the included corrected witnesses (0).

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: X.

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 14 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (24) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by

the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.

¹³These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

¹⁴The total number of witnesses is calculated as the total manuscripts (46) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (7) minus the fragmentary witnesses (1) plus the included corrected witnesses (0).

- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine textform for this verse in a transcribed manuscript: X.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 25 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (15) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

¹⁵These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

¹⁶The total number of witnesses is calculated as the total manuscripts (46) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (3) minus the fragmentary witnesses (1) plus the included corrected witnesses (0).

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 11 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The

remaining witnesses (31) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

¹⁷These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

¹⁸The total number of witnesses is calculated as the total manuscripts (45) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (6) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine textform for this verse in a transcribed manuscript: XI.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 19 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (20) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: XIII.

Below is the earliest attestation of each *individual Byzantine reading*:

¹⁹These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

²⁰The total number of witnesses is calculated as the total manuscripts (45) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (6) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 19 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (20) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine textform for this verse in a transcribed manuscript: *Byzantine text not attested in its entirety in any of the collated manuscripts.*

²¹These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

²²The total number of witnesses is calculated as the total manuscripts (45) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (8) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 4 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The

remaining witnesses (33) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

²³These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

²⁴The total number of witnesses is calculated as the total manuscripts (45) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (5) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine textform for this verse in a transcribed manuscript: *Byzantine text not attested in its entirety in any of the collated manuscripts.*

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 10 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The

remaining witnesses (30) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.

²⁵These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

²⁶The total number of witnesses is calculated as the total manuscripts (45) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (3) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine textform for this verse in a transcribed manuscript: XI.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 26 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (16) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.

²⁷These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

²⁸The total number of witnesses is calculated as the total manuscripts (44) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (10) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine textform for this verse in a transcribed manuscript: XI.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 25 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (9) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: X.

²⁹These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

³⁰The total number of witnesses is calculated as the total manuscripts (44) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (5) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 26 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (13) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: *Byzantine text not attested in its entirety in any of the collated manuscripts.*

³¹These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

³²The total number of witnesses is calculated as the total manuscripts (44) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (5) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 21 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (18) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: V.

Below is the earliest attestation of each *individual Byzantine reading*:

³³These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

³⁴The total number of witnesses is calculated as the total manuscripts (44) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (2) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).
